

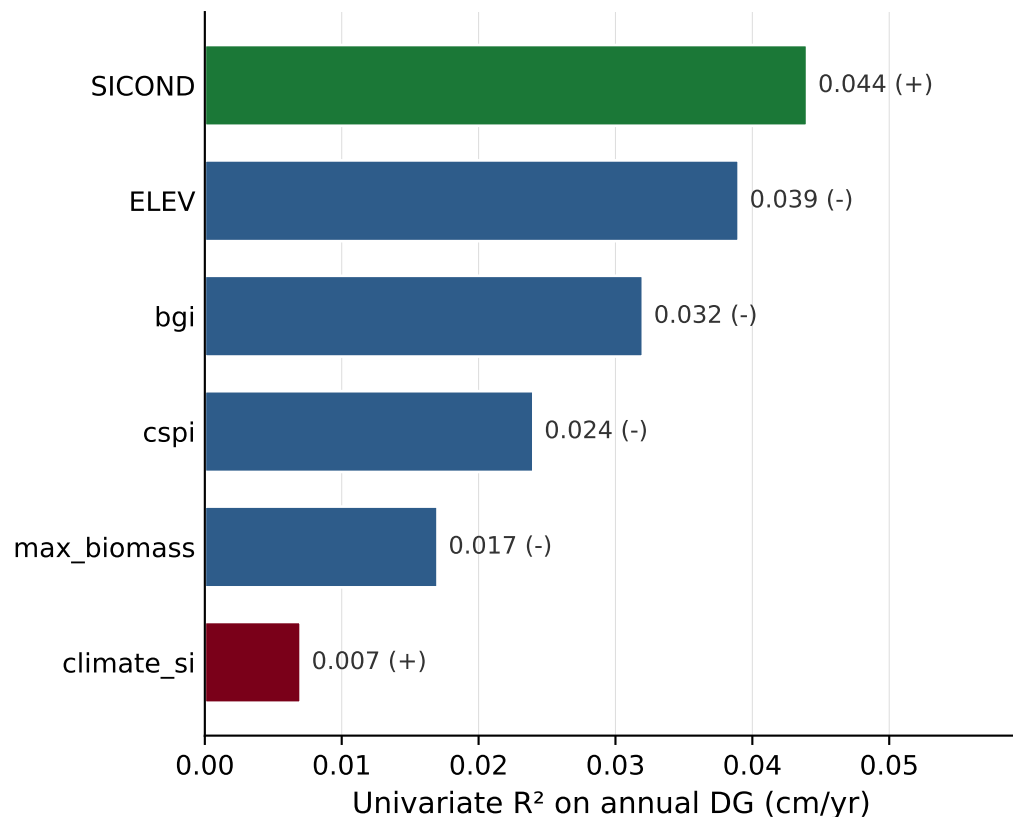

Figure 4. Candidate covariate importance for species-free DG (job 9572122, 100K subsample)

The 90-second exploration that shifted the manuscript candidate from v4_full + climate_si to v6 + SICOND + is_plantation + ELEV

A. Site variable head-to-head SICOND beats climate_si by ~6× with correct + sign

B. Top 8 candidate covariates after core STDAGE leads; is_plantation deserves main-effect status
